

# 3rd Grade Science Vocabulary Crosswords 6

**Across**

- 3 A plant structure where seeds are made in some nonflowering, conifer plants.
- 5 The trace or remains of something that lived long ago.
- 9 The plant structure that grows around and protects seeds.
- 11 The plant structure that takes in carbon dioxide and releases oxygen and is responsible for making food for the plant.
- 12 Died out, leaving no more of that type of organism alive.
- 14 An animal that eats plants or other animals.
- 16 To react to something or a stimulus.
- 18 Substances in the environment that help an organism survive.

**Down**

- 1 A large body of salt water.
- 2 The plant structure that is usually bright colored and scented to attract insects for pollination. It also makes seeds for the plant.
- 4 A substance that living things need to grow and stay healthy.
- 5 A series of organisms that depend upon one another for food - including producers and consumers.
- 6 The plant structure that holds a plant upright and carries water from the roots to the rest of the plant.
- 7 A mixture of minerals, weathered rocks, and decayed plant and animal matter.
- 8 A physical adaptation in which one kind of organism imitates the traits of another in color or shape.
- 10 An organism - plant - that makes its own food.
- 13 The plant structure that takes in water and nutrients from the soil and holds a plant in the ground.
- 14 The basic building block that makes up all living things.
- 15 A young organism that is just beginning to grow.
- 17 The plant structure that can grow into a new plant.

**Possible Answers:**

cell, cone, consumer, embryo, extinct, flower, food chain, fossil, fruit, leaf, mimicry, nutrient, ocean, producer, resource, respond, root, seed, soil, stem
