

4th Grade Science Vocabulary Crosswords 5

Across

- 1 The place where a river deposits the sediments it picks up, forming a triangle shape.
- 3 Water falling from the sky as rain, snow, sleet, or hail.
- 6 The slow process of breaking down rocks into smaller pieces.
- 7 Coal, oil and natural gas.
- 8 The slow process of moving sediment from one place to another, usually by moving water.
- 9 Wispy, feathery clouds high in the sky.
- 15 Tool used to measure rainfall.
- 18 What makes up rocks. They have different colors, hardness, streak colors, and luster (shininess).
- 19 Clouds that form in low, flat layers, blanketing all or most of sky.
- 20 Clouds that look like fluffy, rounded piles of cotton.
- 21 Rock formed by heat and pressure deep inside the Earth.

Down

- 2 Mountain created as lava erupts from inside the earth.
- 4 Resources that cannot be replaced.
- 5 The sudden movement of rock and soil down a slope.
- 7 When water cannot be absorbed into the land and overflows rivers. Causes damage but also deposits new soil on plains making fertile farmland.
- 10 Rock formed from cooled magma or lava.
- 11 Resources that can be replaced.
- 12 Rock formed when layers of sediments were pressed and cemented together.
- 13 The shaking that results from the movement of the plates that make up the Earth's surface.
- 14 The remains of an organism that lived long ago, most commonly preserved in sedimentary rock.
- 16 Tool used to measure wind speed.
- 17 Tool used to measure air pressure.

Possible Answers:

anemometer, barometer, cirrus, cumulus, earthquake, erosion, flooding, fossil, fossil fuels, igneous, landslide, metamorphic, minerals, nonrenewable, precipitation, rain gauge, renewable, river delta, sedimentary, stratus, volcano, weathering
