Use simple annual interest to solve the following.

1. You put $\$ 474$ into a savings account with an interest rate of $4 \%$ which earns $\$ 56.88$ over a period of time. How long was the period of time?
2. How much principal must be invested to earn $\$ 30.88$ in one year at an interest rate of $4 \%$ ?
$\qquad$
3. If you invest $\$ 368$ at an interest rate of $6 \%$, how much money will you have after nine years?
$\qquad$
4. $\$ 28.40$ is earned on funds invested at a rate of $5 \%$ over four years. What was the amount of the original funds?
5. The cost of a loan for $\$ 294$ over one year is $\$ 8.82$. What was the rate on the loan?
$\qquad$
6. How much interest does a $\$ 301$ investment earn at $5 \%$ over five years?
$\qquad$
7. What is the interest rate if a principal of $\$ 883$ earns $\$ 635.76$ in interest in eight years?
$\qquad$
8. How much principal must be invested to earn $\$ 495.00$ in six years at an interest rate of $10 \%$ ?
$\qquad$
9. The cost of a loan for $\$ 183$ over nine years is $\$ 164.70$. What was the rate on the loan?
$\qquad$
10. You invested $\$ 956$ and received $\$ 1,185.44$ after three years. What was the interest rate?
