

Across

- 2 A piece of information that is needed to solve a real life problem.
- 3 An answer that makes sense in the context of a real life problem.
- 5 The result of dividing two numbers or expressions.
- 7 The result of multiplying numbers or expressions together.
- 9 A piece of information that is not needed to solve a real life problem.

Down

- 1 To manipulate an equation to find out the value of a variable.
- 4 Changing an equation around to get the variable on its own.
- 6 A mathematical statement showing that two quantities are equal.
- 8 Term of measurement. For example, speed is measured in miles per hour (mph).

Possible Answers:

equation, irrelevant, isolate, product, quotient, relevant, sensible, solve, unit
